CONTINUOUS ENCRYPTION YOU CAN DEPEND ON

No matter your industry, your data is your business - and having the right security controls in place to protect sensitive data is critical to growing your business and maintaining the trust of your customers.

Absolute Encrypt keeps a watchful eye on your encryption policies so you don't have to. Through continuous monitoring and automated reporting, Absolute Encrypt ensures your device encryption is always on and ready. Backed by the full power of Absolute's patented firmware persistence technology, this extension of the Absolute Automate service enforces always-on encryption policies, even if a device is wiped or hard drive replaced.

Absolute Encrypt enhances your security posture in four key ways:

Monitor	Continuously monitor and enforce your encryption status
Control	Ensure defined security controls are in place to continuously protect endpoints
Secure	Protect sensitive data and improve your security posture with always-on encryption
Respond	Automatically encrypt devices and enable helpdesk key recovery

- Prevent sensitive data from being leaked
- Ensure BitLocker™ encryption is always active
- Automatically enforce device encryption policies
- Maintain data compliance and improve security posture
- Give your security team the ability to protect day-to-day security operations and respond to endpoint threats
- Automatically re-enable encryption through continuous monitoring and control

ABOUT ABSOLUTE

Absolute Software is the leader in Endpoint Resilience solutions and the industry's only undeletable defense platform embedded in over a half-billion devices. Enabling a permanent digital tether between the endpoint and the enterprise who distributed it, Absolute provides IT and Security organizations with complete connectivity, visibility, and control, whether a device is on or off the corporate network, and empowers them with Self-Healing Endpoint™ security to ensure mission-critical apps remain healthy and deliver intended value.
