

DAILY DATA EXPORT

ABOUT ABSOLUTE

Absolute empowers more than 12,000 customers worldwide to protect devices, data, applications and users against theft or attack – both on and off the corporate network. With the industry's only tamper-proof endpoint visibility and control solution, Absolute allows IT to enforce asset management, security hygiene, and data compliance for today's remote digital workforces. Patented Absolute Persistence® is embedded in the firmware of Dell, HP, Lenovo, and 26 other manufacturers' devices for vendor-agnostic coverage, tamper-proof resilience, and ease of deployment. See how it works at absolute.com and follow us at [@absolutecorp](https://twitter.com/absolutecorp).

THE PROBLEM

Keeping an accurate asset inventory is critical for compliance and regulatory reasons, but with continual adds, moves and changes inherent to endpoints, keeping your asset inventory system accurate is nearly impossible. Changes to endpoints and their corresponding asset records are typically based on people and process, not technology. Without technology supporting the people and processes, inventory accuracy suffers.

The consequences of inaccurate inventory includes:

- Inventory and accounting gaps identified during audits
- Unused, underused or misappropriated resources
- Time wasted performing physical inventories for reconciliation
- Extended troubleshooting and resolution for endpoint issues
- IT security issues due to lack of asset visibility and control

SOLUTION OVERVIEW:

Absolute provides the single source of truth for endpoints and now, you can easily combine Absolute data with your asset records in your asset inventory system; giving you the added visibility you need to keep your asset inventory up to date. With the new data export feature you can quickly identify asset discrepancies in systems like Hayes or Remedy. Additionally, you can enhance those records by including other system details that will help improve IT and security processes.

Available daily, the CSV exports includes key device details such as last logged in user, device name, IP address, and details on critical controls like encryption status, anti-virus installed and version and more! By actively combining fresh data from Absolute with your other systems you can better track assets, be better prepared for audits, reduce time spent on manual processes and have more intelligence about the devices in your estate, which will save you time and money.

Setting up a data export has never been easier. Contact us today!

LEVERAGE THE POWER OF ABSOLUTE DATA TO:

- Limit manual processes through data integration
- Expand the visibility of device information into other key systems
- Validate asset records and remediate gaps to improve audit compliance
- Present additional actionable intelligence on your endpoints
